Thetford Mines, April 28th 2026.

To whom it may concern,

Object : Use of V-RODTM GFRP Reinforcement with Element ICF Systems.

Pultrall Inc. is pleased to confirm that its V-RODTM glass fiber-reinforced polymer (GFRP) reinforcing bars are fully compatible for use with Element ICF wall systems developed by Logix Brands.

V-RODTM GFRP reinforcement is designed to be used as an alternative to steel reinforcement in concrete structures, offering advantages such as corrosion resistance, reduced weight, very good thermal isolation properties and long-term durability. When used in conjunction with Element ICF systems, V-RODTM reinforcing bars can be installed following conventional reinforced concrete design and construction practices applicable to ICF wall assemblies.

Pultrall's V-RODTM product line includes structural grades suitable for ICF applications, including V-RODTM Poly-46 and V-RODTM-46, depending on project design requirements. These products are manufactured in accordance with recognized industry standards and are compliant with ASTM D7957. In addition, V-RODTM Poly-46 is evaluated and certified under ICC-ES acceptance criteria.

We support the use of V-RODTM reinforcement within Element ICF systems as part of reinforced concrete designs that comply with applicable building codes and engineering standards (NBCC, CSA S806, and CSA S807). Designers and contractors should follow project-specific structural design documents and applicable codes when selecting reinforcement size, spacing, and placement.

Pultrall Inc. appreciates the opportunity to collaborate with Logix Brands and to support Element ICF users by providing reliable, certified GFRP reinforcement solutions. Should you require any additional technical information or supporting documentation, please do not hesitate to contact us.

Sincerely,

A handwritten signature in black ink, appearing to read 'B. Drouin', with a long horizontal line extending to the right.
